Recorded run: a-c6-controls

Session `ECBS1hac5a0f908076`; spec `ECS1hd07d00fb37bb`. Source commit `68e6c8b12d9185824bc071d7bc29ce2c2b5a2372`. Public synthetic, independent one-target solves.

Requested 1024; recorded 1024. Statuses: `{'verified': 1024}`. Required isolation L0; wall time is descriptive only.

Arm	Attempts	Verified	Charged GAE sum (lower bound)	Peak RSS KiB
rho-neg-aa	512	512	3588010.0	128060
rho-plain	512	512	4801509.0	127916

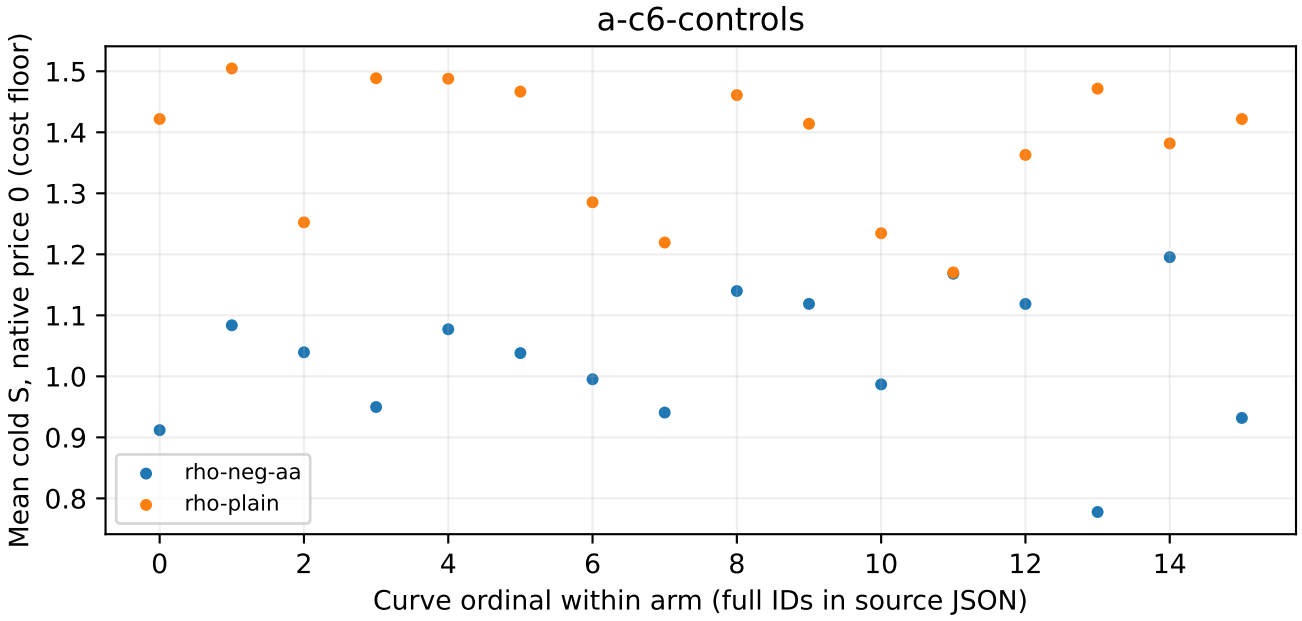

Figure 1: Native recorded means; no timing or speed ranking.

Raw records: `research/conductor_gap_replication_20261025/sessions/a-c6-controls/records.jsonl`; spec and seeds: that session's `spec.json`. Host: `host.json`; exact replay: `research/conductor_gap_replication_20261025/session` All per-curve 0/0.1/1 GAE bands, native counters, resource and failure totals: `analysis/diagnostics-A.json`. The plotted means are native ecbench summaries of verified records. Missing prices remain unknown. These observations alone admit no full-cost method ranking. Calibration sessions are excluded from primary inference.
