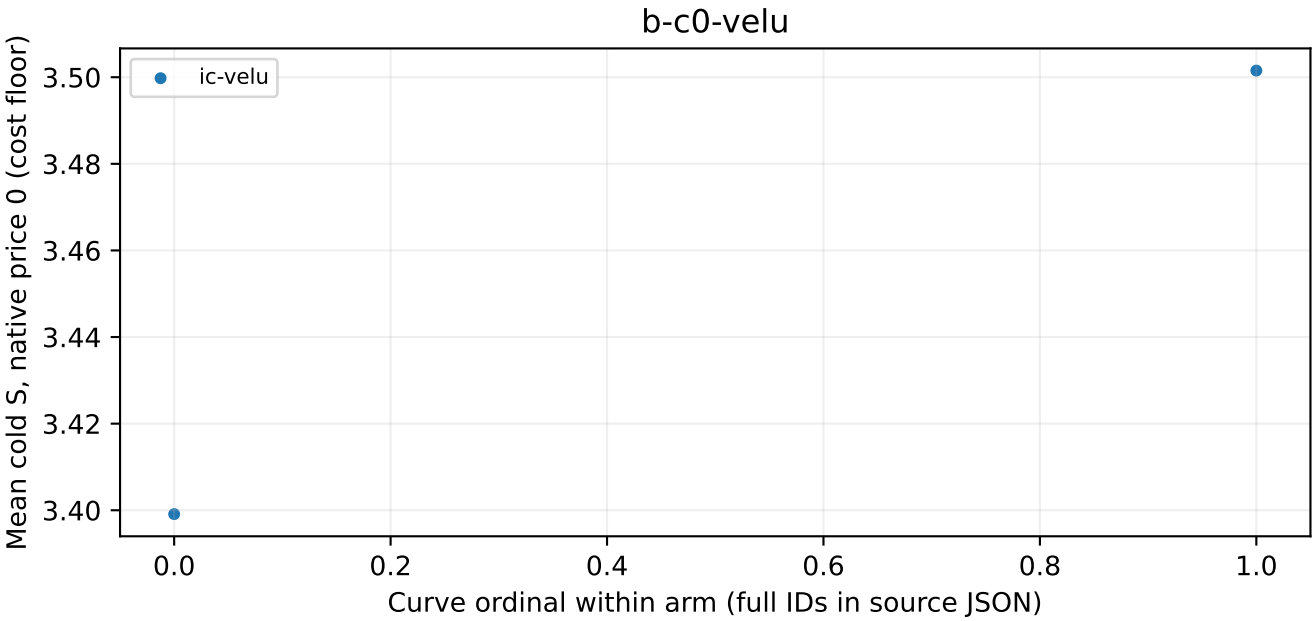

Figure 1: Native recorded means; no timing or speed ranking.

Raw records: `research/conductor_gap_replication_20261025/sessions/b-c0-velu/records.jsonl`; spec and seeds: that session's `spec.json`. Host: `host.json`; exact replay: `research/conductor_gap_replication_20261025/sessions/b-`
All per-curve 0/0.1/1 GAE bands, native counters, resource and failure totals: `analysis/diagnostics-B.json`. The plotted means are native ecbench summaries of verified records. Missing prices remain unknown. These observations alone admit no full-cost method ranking. Calibration sessions are excluded from primary inference.
