Reused actual normalizer / integral localBase
Prior source, same pinned dependencies
Literal signed-grid polynomial bridge
Actual base and completed charts integral
Actual bit mask + strict margin
Diagonal correction valuation exactly G_i
Actual polynomial first coefficient
c nonzero; v2(c)=a+1-i+G_i
82 source-bound statements
Unsigned PCC; no timing claim
Explicit U,V with 2^u labels
Normalized first-jet residual in 2 Z_(2)
Actual weighted row factors c U
Unscaled residual weight >= v2(c)+1
OPEN: all higher jet / precision layers
2^u may exceed old tile count
OPEN: full mode / recursion / ECDLP bit cost
