Two frozen completed inputs
Different curves and planted targets
Native exact arithmetic audit
16 image abscissas each
Usable reference6 / cubic8
Frozen source: direct cubic substitution
Recorded raw degrees12,8,8
Reference4,4,4
W-only stage result has limited scope
No useful-relation yield or DLP recovery
Proposed standard graph representation
x_i=N(u_i), ordinary S3 in x_i
Same polynomial-cover solutions
Next admitted test: direct vs graph on identical inputs
Account for added variables and all solve/output costs
Sub-exponential bit cost remains unproved
