Same actual W(T), every retained node t
No assumed nonzero local first jet
Derived graded base + correction
Every coefficient, including anchor zeros
Actual row congruence and denominators
NearOne precision v-u+1
Normalized constant zero
Coefficient n+1 has weight at least n
Literal representative factors
2^v labels; exact at full refinement
v=u: polynomial crossing factors
Normalized residual 1; weighted residual w+1
OPEN: full polynomial higher precision
actual mode inventory + complete expected bit cost
