Affine multiplication budget amendment review

[pcc:unverified] T-2092. Static source comparison; no compiler, tests or execution. Source delta supported; initial freeze defect corrected and rereviewed.

> T-2092: static budget amendment review
>
> 137 calls / 26 names / all source bytes unchanged
>
> 10800 ⟶ 10200 seconds; compiler 9000 ⟶ 8400
>
> Initial R1: stale SESSION hash; corrected snapshot rereviewed

Preserved scope

Executable files match their originals after only the total10800⟶10200, compiler9000⟶8400 and derived work cutoff10780⟶10180 replacements. All137 module source files are identical, with137 unique calls and26 named audit obligations. Source bindings, import graph, release template,1CPU/8GiB/no swap/128tasks,120seconds per module and no-retry logic remain unchanged. Pre/post remain900seconds each. These are caps, not completion measurements.

Initial finding R1 (preserved)

The initial candidate freeze retained an obsolete SESSION.md digest: expected0cea89fa21e94973a63510f37c176d9645656e58518f9cb45c02631a8ed37804, actualbb3e85f3804576b5a812b1feaea565651b4cd50711c8d0cfa399a1b2292776ce. launch.py checks every frozen entry and rejects before execution. The outer manifest matches; the inner freeze still needs correction in a separately preserved prospective revision, followed by dependent pin regeneration and re-review.

Admission and provenance

The old November10 05:11:39 UTC deadline remains and is expired. Release is false and ledger fields null. Renewed43200worker seconds does not supply a stop deadline. No execution is admitted by this review. Exact inputs: original freeze7347919c56723f6680e2ea26ea58f3a82534d0df68dd1f1e093bad063bc1cdf8; candidate freeze5e1fffb853df99c54af0250796713fab6702969ccdf45f8fe3a3d87dce5030b5. Read local launch/replay and manifests; catalog lacks KB tools. See REVIEW.md, result.json and comparison.csv. No novelty claim; no candidate files changed.

Corrected snapshot rereview

Coordinator retained original freeze as pre-session-binding-repair-freeze.json. Corrected freezec60341601de6e0bbe8d6808fb6054789db2a5d21bfad89354511e1285c6cf870 changes only the SESSION.md digest. All corrected freeze and manifest entries match. R1 resolved for this exact snapshot; source/deadline/resources unchanged. Execution remains unreleased.

The binding-correction-20261110.json record accurately links both freeze snapshots and labels old amendment/report references historical. Its outer-manifest binding also matches.
