Find-root renewal: independent source review

Presentation of the sealed root-authored review; no second independent review is asserted.

20 unchanged source/control/import/runtime files

11 calls / 14 names → operational source delta checked → ledger and release pending

The reviewer checked twenty unchanged theorem, control, import and runtime files, frozen hashes, prior review binding, fresh identities and deadline/campaign arithmetic guards. The exact eleven calls, fourteen names and 900/600/900-second caps are preserved. Actual prior debit and remaining allowance remain null; execution is not admitted. This is an operational source-delta review, not a new theorem-fidelity verdict or runtime result. The original review JSON remains unchanged. Its SHA256 is: fe44ea581597d6b6b13ef393b132d259f6515e8c68614a6ccb30ee12a40a797d
