Root library v4: compile and four controls passed; full suite incomplete

The release-library build completed successfully in 1024.496249 seconds. The generated test binary was recorded by hash, and its inventory listed 6179 tests. Each of the four required pencil controls ran separately and reported exactly one passed test, zero failures and zero ignored tests.

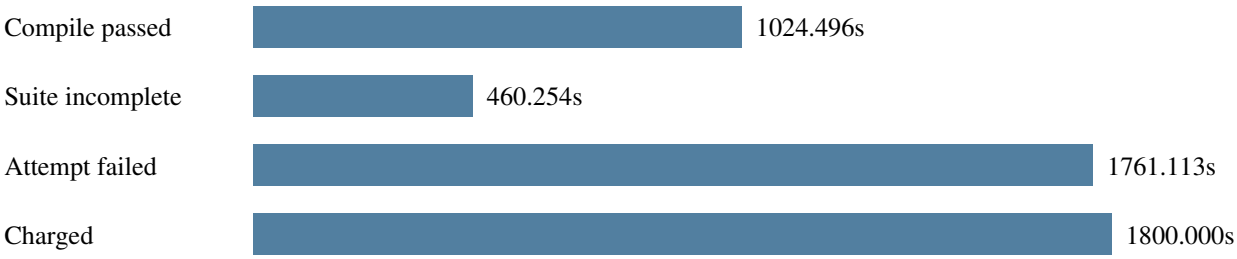
The full-library command ran for 460.254020 seconds before the worker's work deadline stopped it. Its child was reaped with exit -9. Raw named row counts before interruption are {'ok': 2142, 'ignored': 45, 'FAILED': 18}; these are partial output observations, not a completed suite result. No final test summary appears. The unfinished line is retained verbatim in result.json and the immutable archive.

Pre-input verification passed. Post-input custody verification was not reached. Completion status is failed, while completion sealing passed. Every terminal-manifest digest and size and both durable log-prefix checkpoints were independently checked. Worker, supervisor, permit and root terminal receipts agree on invocation a80ba03158b54687892e12b9e78f7c70. Owned cleanup is recorded; MainPID is zero and the owned cgroup is absent.

Worker elapsed time is 1759.663335 seconds, completion elapsed time 1761.112730, and caller elapsed time 1761.257784. These overlap and must not be added. The full 1800-second reservation is charged, bringing the recorded campaign total to18240seconds. Native limits were2CPU,16GiB,zero swap and512tasks. The compile and individual-control successes are retained independently of the incomplete full suite.

The exact publication receipt binds d97d50bb1c8549a4d71bc4df75e601cbb8818618 and admission5adfda70. All29 native and caller files were copied only after terminal confirmation; hashes were checked before and after archive packing. No compiler or test was rerun. The retained binary and cache remain available to a separately admitted continuation; no automatic retry was started.

Root v4: overlapping elapsed times and charged reservation



Four exact controls passed. Full suite interrupted; post-custody not reached.

Native receipt durations overlap; they are not additive.
