Public support G and curve f
N(A,B) = A² - fB²
Componentwise jets: (A+GJ, B+GK)
Explicit Bezout inverse reaches any first jet
Coupled chart: G divides A-sB
s²=f modulo G; coordinates may move
Modulo G² can pass
Full higher-order residual can remain
Old and new pole budgets
force J=K=0
Supplied public branches → linear reconstruction
F17 control: kernel dimensions 1 and 0
Open: choose branches jointly and efficiently
Complete bit-cost bound still required
