Phi: explicit Velu formula
19 scalar images / native full addition
I=[10]D on odd subgroup
not a global inverse
E/F37: y^2=x^3+7x+19
P=(1,8), order19
38 rational points
Actual d=35 twist
y^2=x^3+28x+33
U=(32,29), order19
Kernel control: K=(4,0)
Phi(K)=O but 19K != O
