ECC2K-130 leads survey, 2026-10-23

Class: ideation and cross-checking. No measurement, no claim. Full text: `research/notes/ecc2k130/RESEARCH_ECC2K130_NEW_LEADS_20261023.md`.

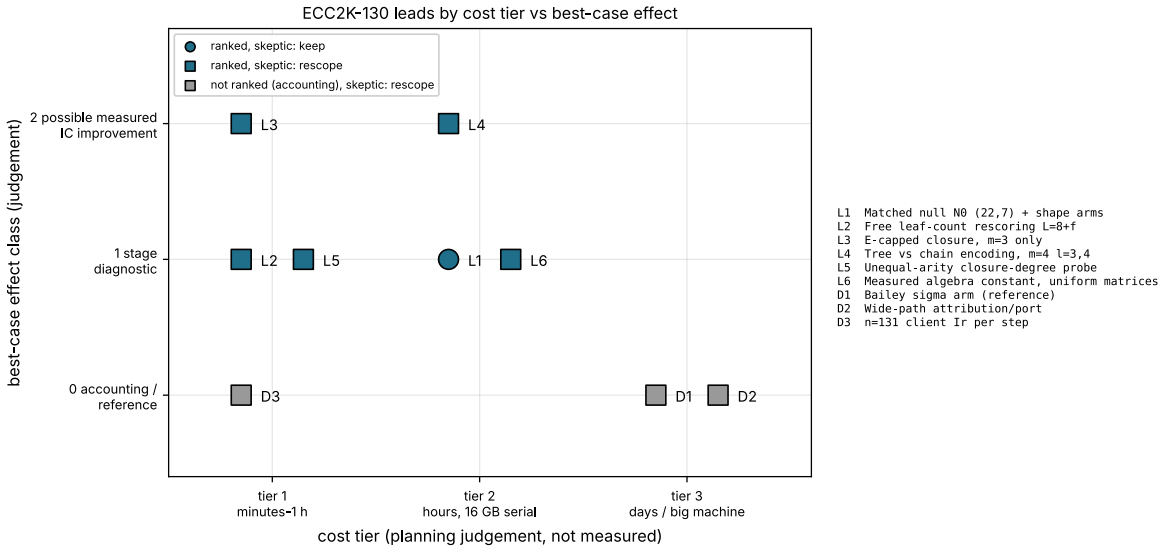

Figure 1: Leads by planning cost tier and best-case effect class (both judgements, not measured; source `leads.json`). Skeptic verdict marked by shape.

Ranking

1. L1 matched null N0 at (22,7) and shape arms (keep).
2. L2 free leaf-count rescoring of G3/G4, L = 8+f, total closures 8+2f.
3. L3 e-capped closure, m=3 only.
4. L4 tree against chain encoding, m=4, l=3,4.
5. L5 unequal-arity closure-degree probe.
6. L6 measured algebra constant on uniform matrices.

Not ranked (accounting or reference, skeptic: rescope): D1 Bailey sigma arm, D2 wide-path rho attribution, D3 n=131 client Ir per step.

Gap to rho

All distances are the model's unconverted figures: +7.62 bits (m=4 degree 4), +10.32 bits (degree 5), free-oracle floor 2^56.46. No lead moves a priced row below rho; K is unmeasured.
