Known line inputs over F17
L=2X+8; M=4X+6; f=X^3+2X+2
Exact two-line product norm
A=f+LM; B=L+M=6(X+8)
A^2-fB^2=G with six distinct nodes
Actual nonconstant chart a=3,b=1,d=6
Explicit UF+V(fH)=1; target Q=(0,6)
Actual quotient functional from V mod F
Derive mu(G)=0
General canonical matrix-pencil theorem
All hypotheses instantiated; dimension6
Known-answer correctness control
Still separate: restricted rank/corank,
adjugate recovery and public-input finder
No runtime or scaling result
