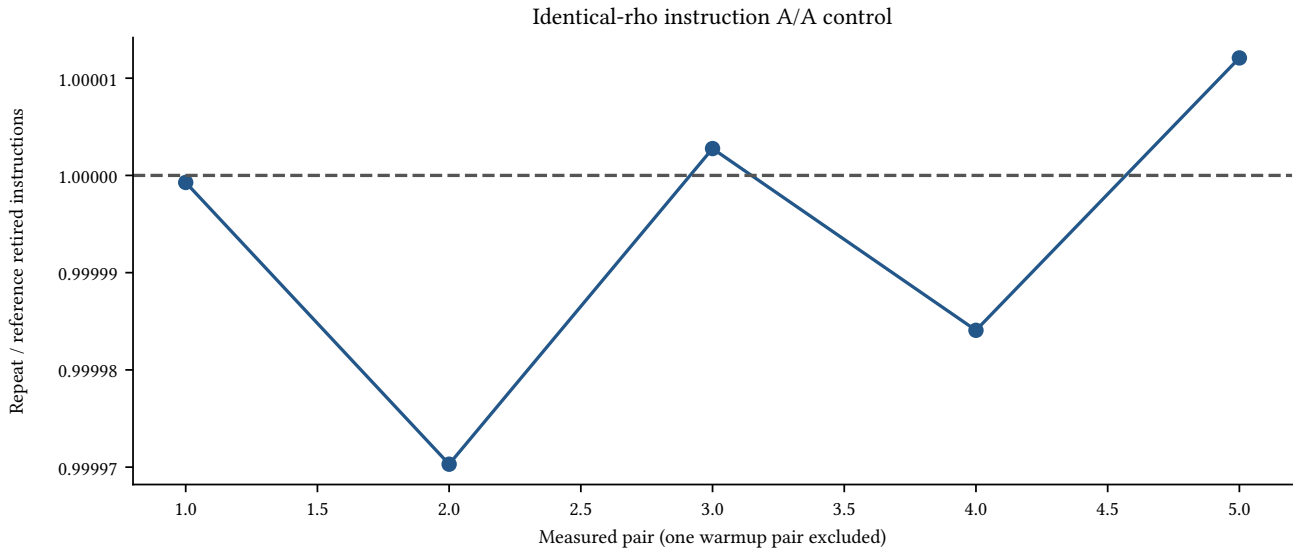
Retired-instruction A/A control

ECBS1h825e5ad6666e; same actual-40-bit subgroup model, workload and binary. Five measured identical-rho pairs and one warmup pair; all answers verify, all ten measured records replay identically. Primitive and logical native counters agree exactly.



Frozen ratio range: 0.9999703014–1.0000120823. Median: 0.9999992766. These are user-space process instruction counts, not qualified wall times. L0; no isolation speed claim.
