Actual-quintic norm composition: ten clean theorem readbacks

Controls/readback continuation | producer evidence | 2026-11-03

All10 actual theorem declarations printed only standard Lean axioms:
propext, Classical.choice, Quot.sound. No theorem was recompiled.

Three controls also printed standard axioms. Zero-scalar control failed:
`by simp` left not(0=1), emitted sorryAx, and Controls module exited1.

The overall control check is failed; ExpectedFailure was not reached.

Native child reaped; cleanup errors empty. Full dependency custody unchanged.

Actual theorem declarations: standard axioms: 10

Other control declarations: standard axioms: 3

Failed control declaration: sorryAx: 1

Counts parsed from14unique native readback lines; raw failed output retained.

Pre190.328399s; controls81.461091s; post95.060740s (each one observation).

Next: same-statement zero-unit proof correction; no actual theorem changes.

Independent source-fidelity review remains separate; no scientific trajectories.
