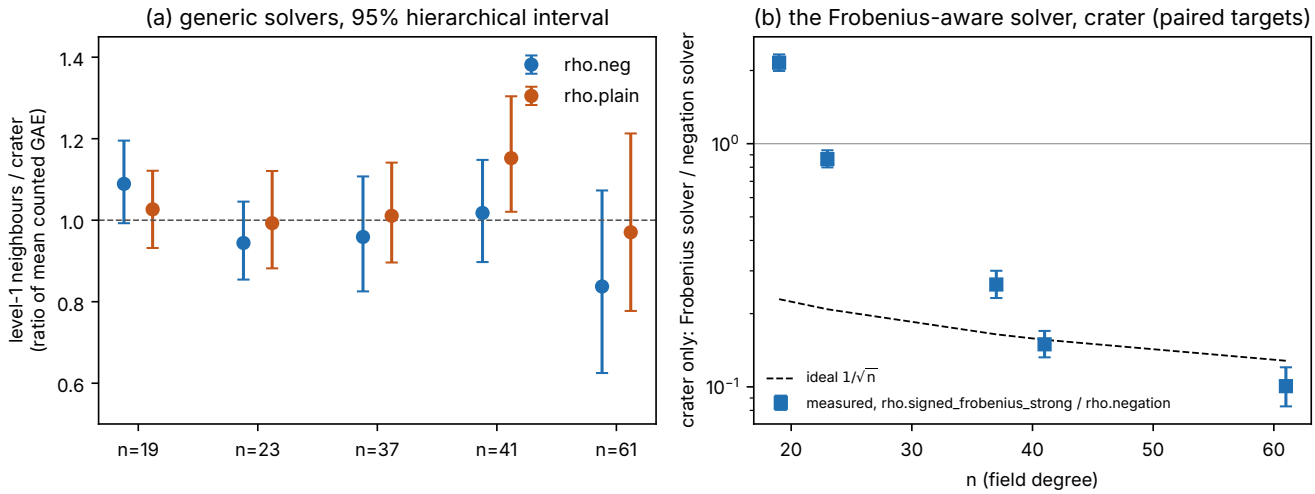

Figure 1: Figure. (a) Level-1 neighbours over crater, mean counted GAE, generic solvers. (b) Crater only: Frobenius solver over negation solver on the same targets, against 1/sqrt(n). Sessions as listed; sample sizes in the table.

Limits: neighbour curves unregistered; the rho-neg-aa control is bit-identical to rho-neg; n = 61 ran 6 neighbours with 4 targets each; no wall time; no isogeny map computed.
