Run report: interrupted session A-n19-02 (amendment 1 rerun; 24 of 40 executions)

Descriptive run report (research-visuals, "Every experiment run"): what ran and what was recorded; interpretation is in the study README.

Sessions

- `A-n19-02`: session `ECBS1he8dffc3b6a4b`, spec `ECS1h7d3b9a04b90d` (pdp_split_slots_20261012 Part A, n=19); status `running`, 40 executions planned, status counts `{}`; commit `26233e4b77f046e4fbd237b93df9117dcd0e6e35` (dirty: False), binary SHA-256 `226a31f06997964c…`; targets: 8 per curve, seed 202610121101, rounds 1, isolation required L0.

Recorded values (medians over verified runs; per-workload values in ANALYSIS.json)

curve	arm	verified	median S (recorded)	median F4 XORs	median systems	median priced S	priced ÷ strong rho (min–max)
icv1-f2m19-tm797-9c54981b	clo-chain-g4	4/4	1.879	4.519e+11	2218.0	1.393e+06	5.783e+05 (3.08e+05–9.37e+05)
icv1-f2m19-tm797-9c54981b	clo-unsplit-g4	5/5	1.835	6.945e+08	2532.0	2143.444	889.211 (417–1.27e+03)
icv1-f2m19-tm797-9c54981b	rho-frob	5/5	0.504	—	—	0.504	0.212 (0.172–0.908)
icv1-f2m19-tm797-9c54981b	rho-strong	5/5	2.409	—	—	2.409	1.000 (1–1)
icv1-f2m19-tm797-9c54981b	std-unsplit-g4	5/5	19.230	1.242e+09	7959.0	3850.003	1597.180 (1e+03–2.36e+03)

`S` = charged group-addition equivalents / √r. F4 arms: solver word XORs counted, not charged, so recorded S is a lower bound. Priced S adds XORs × the curve's pinned `ns_per_word_xor` (`docs/ic/calibration.json`, calibrated on another host) / √r: a sensitivity, and one that understates F4's per-call work. Table arms (`mitm-frobenius`) are fully charged. Wall time is descriptive only (L0).

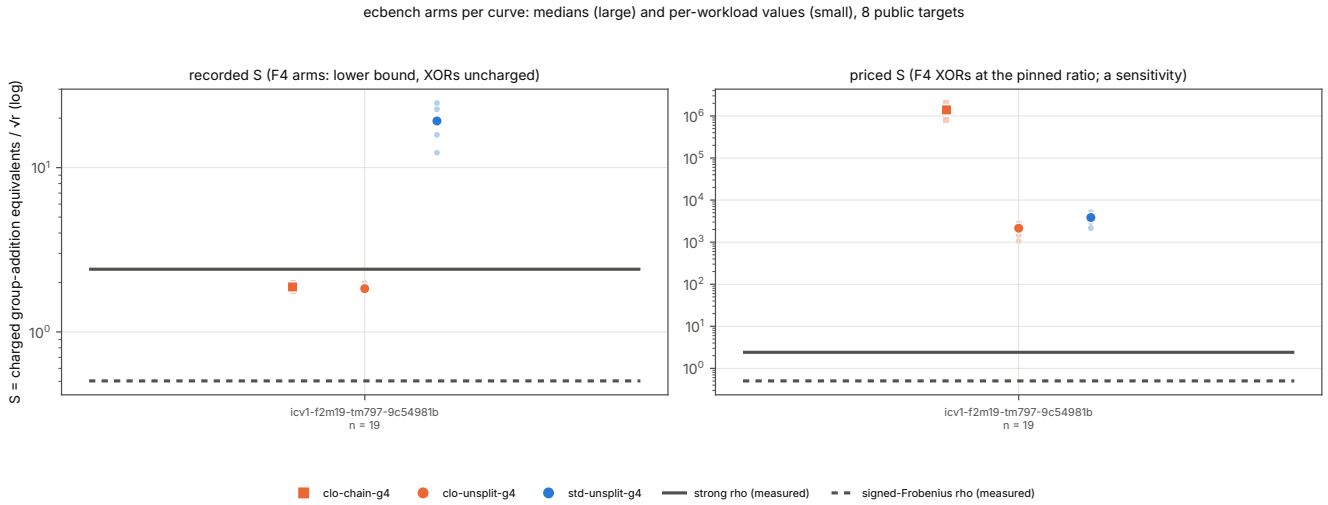

Figure 1: Recorded values from ANALYSIS.json; layout `reports/plot_ecbench.py`.

Raw records

`research/pdp_split_slots_20261012/sessions/A-n19-02/records.jsonl`; audits under `audits/`.

A session marked dirty ran with untracked or modified files in the checkout (drafts of this study's own reports and protocols); the binary SHA-256 above is the one `BINARIES.sha256` records, and `ecbench verify` replays against it.
