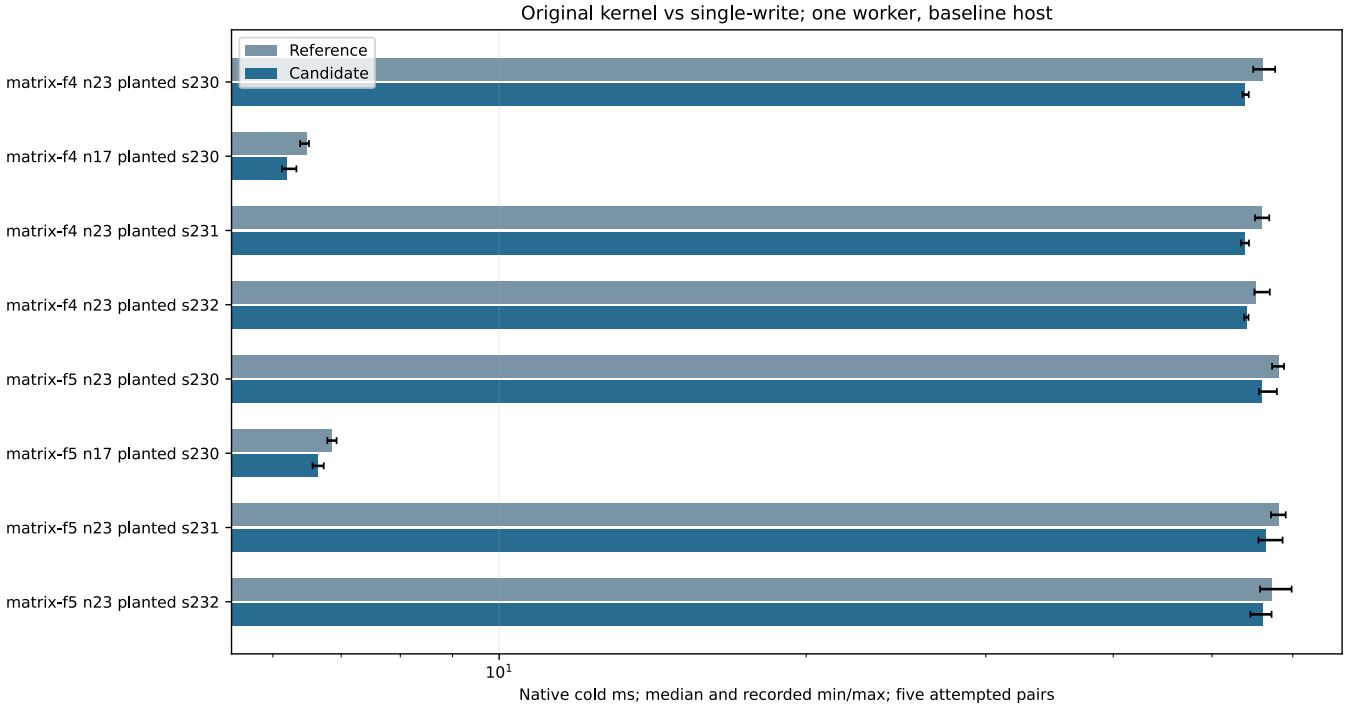
Native baseline and original single-write comparison

Run 20261019-014036-boolean-native-baseline-8d3eb7. Five A/A and A/B pairs, fixed outputs and unchanged isolation gates. Full records, missing samples and native bootstrap decisions are in initial-summary.json.

CPU: Intel(R) Xeon(R) Platinum 8488C. Compiler: rustc 1.99.1 (58cf8f9c3 2026-10-13). Exact identities are in fixture-identities.json.


Complete-root and decomposition comparisons retain their separate boundaries. Oracle preparation is charged in cold costs. random=true is the unplanted generator control; n19 has 36 Boolean variables and its admission refusals are not timings.
