Actual ordinary binary model
y^2 + xy = x^3 + a*x^2 + b; char 2; Delta != 0
x != y
Chord elimination + quadratic factor
Repeated x != 0
Tangent formula + curve equation
Repeated x = 0
Sum is infinity; S3 = b != 0
Actual pointX criterion
S3 = 0 iff x(P+Q) or x(P-Q)
Algebraically closed field
Actual quadratic y-coordinate lifts
Full S3 equivalence
Prescribed affine coordinates, P+Q+R = 0
