Actual finite-field curve
q = field cardinality, N = point count
Explicit trace-square classification
t = q + 1 - N; t² = 0,q,2q,3q,or4q
Prime r divides N
Z/r is a field
q², q³, q⁴, or q⁶ = 1 (mod r)
Finite point equivalence + Cauchy
Actual point of additive order r
ord_r(q) in {1,2,3,4,6}
r coprime to q
