Arbitrary-target known-log study

run-20261021T0636Z-generator-7

This report displays the native recorded-value summary. Each workload is one public target with no supplied logarithm; cold setup is charged on every run. The session recorded {'verified': 288}. Native work is priced equally on all arms at the three displayed weights. Uncounted work or failed recoveries block rankings. A/A controls are retained in the table. Raw wall times are descriptive unless the harness admits them at L2. This report makes no standard-curve, asymptotic, or fastest-tool claim.

The figure displays native per-curve means, not a fitted growth exponent. Read paired uncertainty and admission from the comparison JSON beside this report. The plotted values are copied directly from summary.json.
