Rank deficiency leaves the twist-base target ambiguous

Post-v8 diagnostic; all18 unchanged matrices; native RREF and independent GP

Ordinary base

Matrix rank: 9 / 9

Target fixed by the relation rows

Recovered scalar: 37

[37]G = Q verified on every image

Same recovery on source and all8 maps

Twist-progression base

Matrix rank: 8 / 9

Target varies along the nullspace

Free column: target log k (column8)

Retained direction has target entry1

Same ambiguity on source and all8 maps

Verified: 9 identifiable systems; 9 ambiguous systems.

Original GP field-initialization failure is preserved; pinned preload replay passes.

No new decomposition queries, changed bases or performance inference. Run: rank-v1
