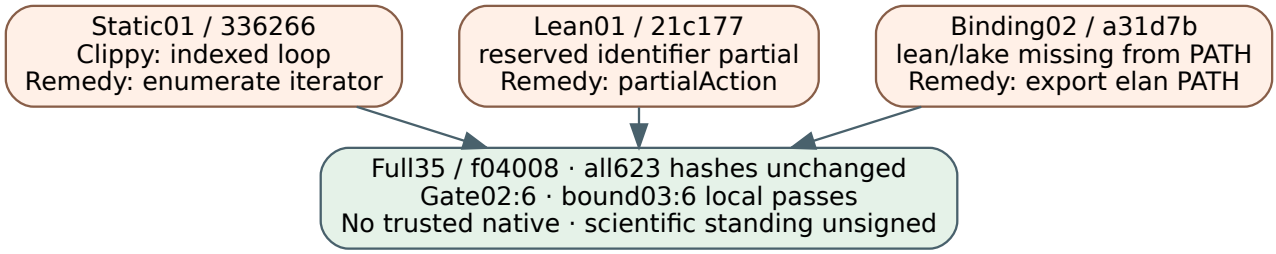
Three retained development failures

2026-11-12 · partial-Frobenius component · all records unsigned



The diagram records actual failure causes and remedies,not performance. Each failed source/ diagnostic/status/custody remains separate. No mathematical prediction failed in these attempts. [pcc:unverified]

Static01 / 336266

StrictClippy exits101 on needless_range_loop at new moduleline80. Use enumerate/take/skip over the same states;retain the exact graph control and strictwarnings. No allowattribute or ignored test is added. Full source,parent,log,exit andSHA are in evidence/partial-static-failed-01. [pcc:unverified]

Lean01 / 21c177

Module build fails before audit because partial is a reserved keyword at definition16 and uses26;dependent axiom print is unknown. Rename the definition partialAction;all finite pairing/ orbit/CRT/normalization/bridge obligations remain. Full failed source/build/gate/status/hashes are in evidence/partial-lean-failed-01. [pcc:unverified]

Binding02 / a31d7b

The first claime9174e is created,but existingPCC returns not_covered: lake/lean is absent from that command PATH,so only statementbinding and hole scan run. Standalonegate02 had passed6/0trusted with PATH exported. Export the known elanPATH and reuse the same claim with new03 verdicts; retain the earlier not_covered result. Full first verdict/claimlist/driver/ gate receipt is in evidence/partial-binding-not-covered-02. [pcc:unverified]

Accepted scope

Full35/f04008 passes with zero failed/ignored/filtered tests,all623 source hashes unchanged,oldguards/fmt/strictClippy accepted. Gate02 and all six exact bindings03 locally pass,zero trusted native. Whole new Mumford maps remain open,and scientific signing stays separate. No benchmark,paidrun, criteria relaxation or history rewrite occurred. REPORT.md links the main source-linked report and all retained attempts. [pcc:unverified]
