Software fixture only

Run: fixture_not_a_run. Caller-supplied source commit: fixture.
Observations only. No statistical, speed, mathematical or timing qualification is inferred.
Synthetic renderer test; zero solver executions
Workloads: 1; expected pairs per price cell: 5; slots: 18; observed: 18; missing: 0.

Recorded outcomes

pencil:verified: 6
rho:verified: 6
rho_AA:verified: 6
Missing rows remain missing; capped, timeout, error and other outcomes retain their original labels. Counts from different epochs are not pooled.

Pair coverage by price cell

Cell labels refer to the exact table. Gray is the expected denominator; blue is admitted pairs. This is a count graph, not a performance or uncertainty graph.
No empirical result. Fixture numbers only.

All36 exact price cells

S2 is twice S/M; N10 is ten times the native event price. Incomplete/unavailable ratios are null, not zero. Partial admitted sums are retained in JSON as diagnostic only; no partial sum is promoted to a complete ratio.

Cell	S2/I/N10	Admitted/expected	Method/rho exact	With calibration/rho exact
1	0/1/0	5/5	900719925474099312345678901234567890/70000000000000000000000000000	3/2
