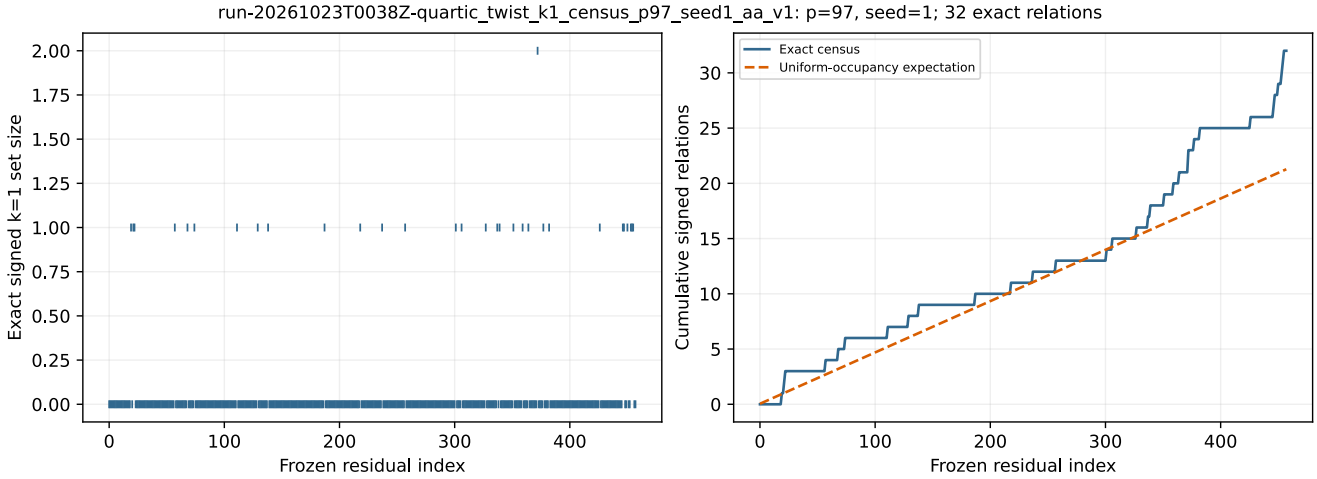
## Recorded observations

- Exact point-keyed group census and independent scalar-keyed audit both pass: 32 signed k=1 relations across 458 frozen residuals; 427 have zero.
- First hit at zero-based query 19; uniform-occupancy heuristic 21.274 relations, observed/heuristic 1.504.
- Independent BSGS verified 72 physical factor logs and the target log using a 9410-point baby table; all 458 complete signed-set digests match.
- Point-keyed census charged 244,440 setup and 237,328,003 query Fp multiplications; these are reference-oracle costs, not polynomial IC costs.



Dashed expectation is a first-moment heuristic, not a fitted model or confidence interval. Group-oracle work is outside candidate IC cost.
