Pencil upper-size diagnostic: p=186,379

One original 32-bit public known-answer target; identity column order.

Candidate status: sparse_matrix_cap; candidate recovered scalar: null.

Same-process rho source-verified: True.

Verified three-point relations: 69,672.

Pivot rank: 69,672; factor-base nodes: 93,187.

Stored coefficients: 10,011,236.

Modular row updates: 1,233,576,833.

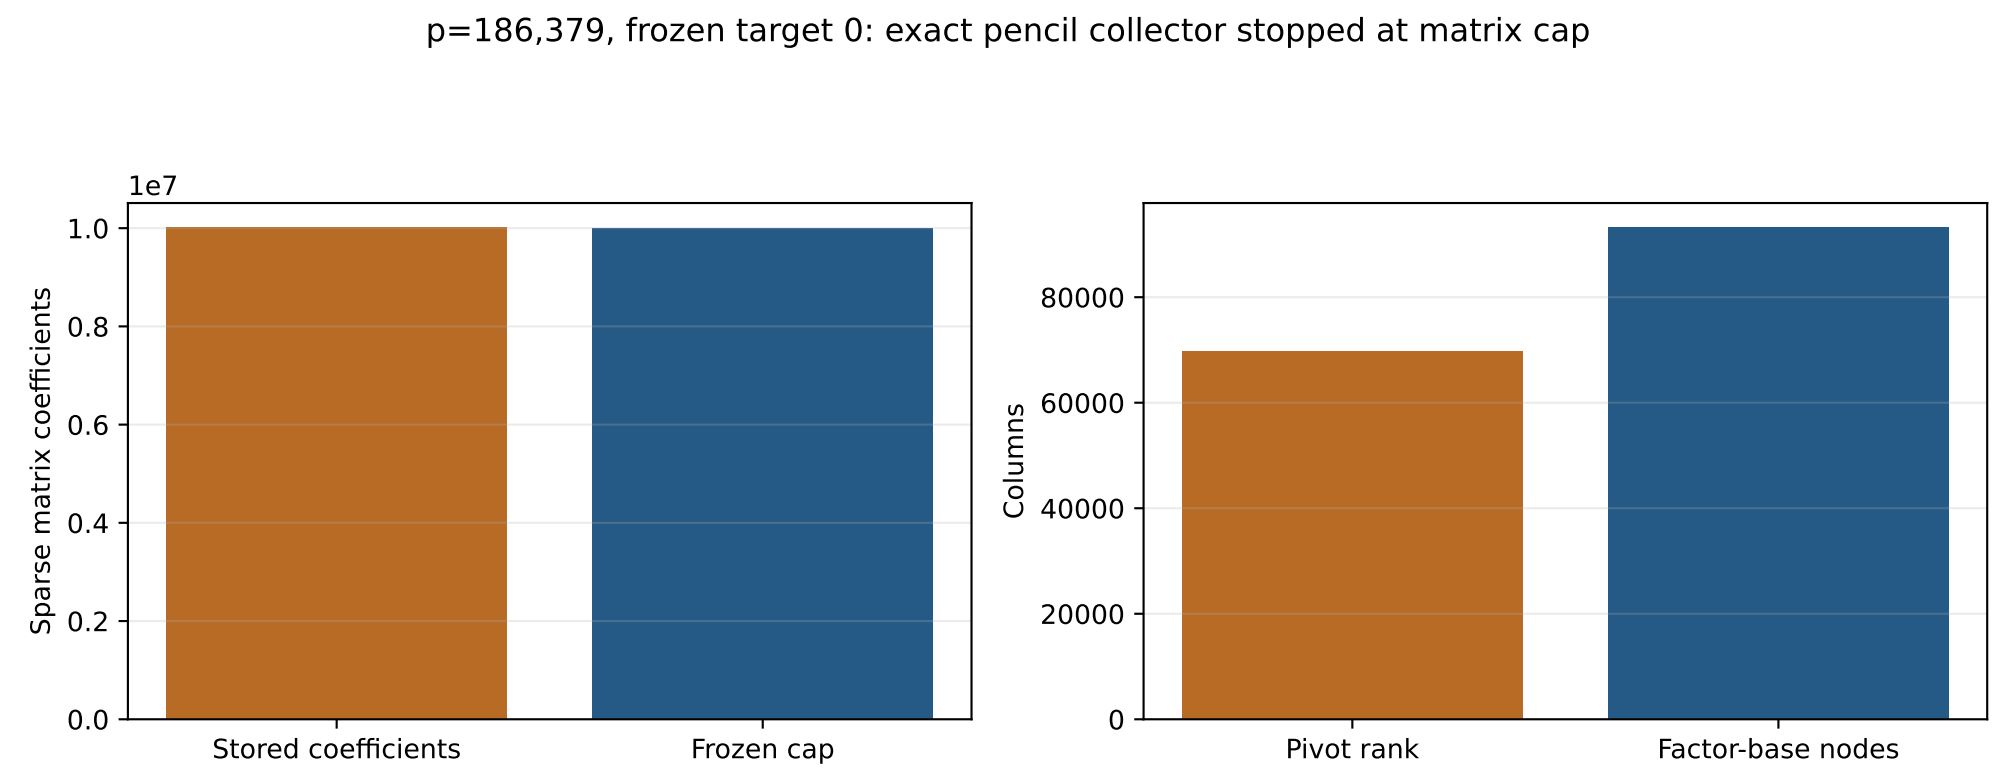
Frozen matrix cap: 10,000,000 stored coefficients.

Complete candidate cost and candidate/rho ratio: null.

Rho counts and the unsuccessful candidate work remain in the raw JSONL.

Wall time: L0 diagnostic; other independent workloads ran concurrently.

Graph and raw JSONL identify the exact stop condition.



p=186,379, frozen target 0: exact pencil collector stopped at matrix cap
