Fast-Kummer coordinate gate

KUMMER-COORDINATES-20261022

21 genus-two models; 105 checked branch-point linear actions.

Generic model cases: 84/84 doubles and 126/126 additions match.

Exceptional model cases: 1,008 nonzero matches, 168 zero outputs,

zero wrong nonzero outputs. All 175 non-pass rows are retained.

Full public cohort: 1,260 targets, 8,820 labeled cases.

xADD: 8,813 nonzero matches, seven zero outputs, zero wrong outputs.

Source scalar, label and affine-map checks: all passed.

Oracle sign disambiguation: 8,820 unique signed classes.

Fast Recover and labeled DLP collector: unimplemented.

Candidate/rho costs and ratio: null, not measured.

Seven target zero outputs occur at 16 and 20 bits only.

Raw: results/target-gate-*.jsonl and coordinate-exceptions.jsonl.

Method: Chung, Costello, Smith, sections 7.1-7.4:

https://www.microsoft.com/en-us/research/wp-content/uploads/2016/02/recovery.pdf
