# Exact degree-peeling pencil collector

run-20261022T0529Z | p=739 | 60 paired targets

All 60 candidate, online-control and rho scalars source verified.

A fresh archive-input rerun matched all non-wall fields.

Full cold pricing: M + 0.5S + 10I; 0.1 GAE/native operation.

Peel candidate: 3,881,713.94 GAE.

Online control: 4,321,445.68 GAE.

Same-process rho: 334,188.08 GAE.

Peel / online: 0.898244.

Peel / rho: 11.615357.

Cells with peel below online: 24/36.

Cells with peel below rho: 0/36.

All 36 cells and every one-target cost are in the native records.

The larger frozen target is a separate pending run.

The graph shows measured price ratios; it does not extrapolate to other curves.
