Guarded fall-degree proof dependencies (derived results)
Primary sources
closure definition; S3 formulas
Three-abscissa ordinary-ring proof
staged quadratic normalization + resultant
finite instances
identity layer only
Characteristic > 3
exact pair (4,5)
Ordinary binary curve
last fall 4 on cube orbits; 5 otherwise
Native sparse replay
checks recorded proof DAGs
Checked Lean identities (partial)
full closure/grid/curve bridges open
Growing explicit membership cardinality B
linear degree bounds, not bit-complexity bounds
missing transfer
Growing Boolean Weil descent
encoding/degree transfer UNPROVED
