ic_autolab round 32 (generic track): report

Protocol: PROTOCOL.md, frozen 2026-11-04T11:20:39Z at git `f91be83cb98ff3dcc56db595854cc610690a14c2`; route `local`. Counted GAE only (deterministic, host independent); no wall-time claim; development loop, no validation-gate row. Loop home: `../`; ledger: `../ledger.json`.

Claim record: `PCC-20261104-976b76` (`python3 tools/pcc/pcc.py standing PCC-20261104-976b76`). Until a signed replay and recompute exist, this round's outcome is an unverified assertion [pcc:unverified].

Outcome

k class	sel	sel / inc at w = 0 [95%]	w = 0.1	w = 1	band	S sel (w = 0 / 0.1 / 1)	S inc	S rho-neg	distance sel / rho
20 **regression**	wwalkg-x09-n2	1.092 [0.956, 1.248]	1.097 [0.954, 1.262]	1.125 [0.940, 1.347]	inc < sel	2.808 / 2.947 / 4.201	2.570 / 2.687 / 3.733	1.558 / 1.671 / 2.684	1.8x / 1.8x / 1.6x
24 **null**	wwalkg-x09-grow-n2	0.937 [0.819, 1.073]	0.944 [0.819, 1.088]	0.985 [0.816, 1.190]	sel < inc	2.071 / 2.164 / 3.000	2.209 / 2.293 / 3.045	1.211 / 1.320 / 2.304	1.7x / 1.6x / 1.3x
28 **null**	wwalkg-x09-n2	0.972 [0.804, 1.174]	0.967 [0.794, 1.176]	0.936 [0.738, 1.189]	sel < inc	2.080 / 2.194 / 3.221	2.140 / 2.270 / 3.439	1.098 / 1.202 / 2.132	1.9x / 1.8x / 1.5x
32 **no_challenger**	none (best candidate `wwalkg-x09-n2`, train S 1.901 / 2.000 / 2.889)	-	-	-	-	-	1.867 / 2.025 / 3.445	1.057 / 1.161 / 2.097	inc: 1.8x / 1.7x / 1.6x

Classes follow the protocol's decision rule. Distance to rho is the distance remaining, not a gate. The reasons per size:

- k = 20: compare ops.status = ok, admissible = true; sel / inc = 1.0924 [0.956, 1.248] at w = 0; band: inc < sel; A/A inc-aa / inc interval [1.000, 1.000] contains 1
- k = 24: compare ops.status = ok, admissible = true; sel / inc = 0.9375 [0.819, 1.073] at w = 0; band: sel < inc; A/A inc-aa / inc interval [1.000, 1.000] contains 1
- k = 28: compare ops.status = ok, admissible = true; sel / inc = 0.9719 [0.804, 1.174] at w = 0; band: sel < inc; A/A inc-aa / inc interval [1.000, 1.000] contains 1
- k = 32: no_challenger

ratchet

Evidence and deviations

- ecbench binary sha256: `9f3a25b151d9868419ec86574451424a506f06c9bf8e5d790b44d48428feb4eb`; `--cpus auto`, allow_busy = true; `verify --replay 8` per session; audit receipts in `analysis/`; sessions in `sessions/` (records in the artifact store when large).
- Route: the local route is an explicitly requested development screen, not the Iso Lab EKS default; counts are deterministic and replayed, wall time is not claimed. No row of this round enters the IC leaderboard or `benchmarks/README.md` (validation gate).
- Train selection is in sample (disclosed); the holdout is fresh (new `target_seed`, excluded exposures). Failed, timed-out and regressing arms are retained above.
