APS follow-up: correctness paths (no measured speedup)
Known labels R = uG + vQ
Check curve, subgroup and labels
Two-parameter line y=tX+c
Monic cubic H(t,c) divides F_V
Coordinate encodings
Exact V_i domain tags
only certified propagated labels
Optional j=0 pruning
Check full orbit and propagated labels
Add t*z-1=0
unpruned control
Native F4 + substitution
Finite coordinate domains; factor other univariates
Shared cooperative deadline
Evaluate original equations
Decode and deduplicate coordinates
uninformative: continue
Exhaustive mode
Compare complete sets with legacy scan
and independent point-addition oracle
Streaming mode
Check signed point sum; reject B=0
Verify dG=Q before stopping
Enumeration complete
or explicit timeout/incomplete status
Verified witness; enumeration partial
Keep visited sets and aggregate diagnostics
