Actual E(F13)[7] bases B and unknown Q
finite integer coefficient universe V
Phi; I=[4]D on 7-domain
Actual Phi(B), Phi(Q) on T(F13)[7]
complete matched relation rows
Equal rows, modulo-7 spans and rank increments
equal complete adaptive collection states
Degree-admitted subsets / solver profiles
explicit compression hypothesis required
actual bounded solver NOT implemented
Public base logs + admitted valid shifted relation
recover ORIGINAL main scalar modulo 7
