N83 root11 fine-grid screen

Run report | 2026-10-17 | generated 2026-10-21

Five K arms ran sequentially on one ordinary macOS ARM64 host.

Each arm independently replayed 128 public points and exited 0.

Selection rule: lowest geometric mean target-online interval;

ties go to smaller K. K3072 was selected.

Shared workstation, 48 GiB RAM; no dedicated-host claim.

Process interval includes base/index/log preparation, all queries,

and producer checks. This is an exploratory selection screen.

Targets SHA-256: 72486b7d708023838db1104a4a5e75a04b915d6f6d4013057c934fb31000aa87
