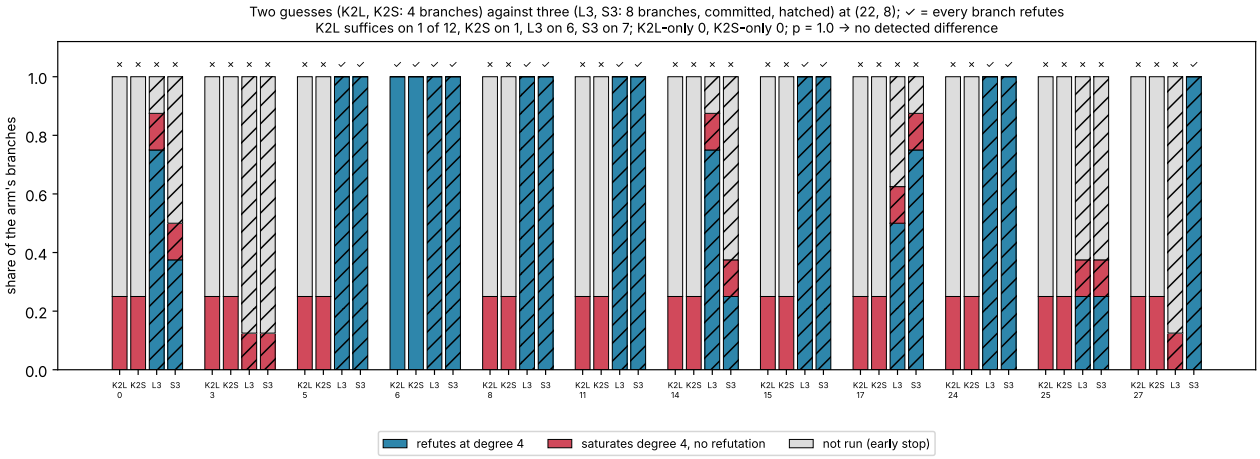
Two guesses suffice on 1 of 12 draws at (22, 8)

Study `research/dreg_two_guess_20261106/`, pre-registered. **Class:** stage diagnostic. **Standing:** unverified assertion until a pcc verdict exists.

Question

Three guesses (S3, L3) suffice at degree 4 on 7 and 6 of 12 draws. Does a two-guess set, which would halve the branch count, suffice on any draw?

Result



- Both two-guess sets (S3 or L3 without e_1`[0]`) suffice on draw 6 only and fail at their first branch on the other 11.
- They never disagree: no detected difference.
- Controls valid.

Reading

- At $\ell = 8$ three guesses remain the floor for these guess kinds on 11 of 12 draws; draw 6, a structural outlier, needs only two.
- No row moves, and rho is not reached.
