Pencil gate: terminal checkpoint 18 coverage

pencil-p186379-20261030-c1 · Recorded coverage, not performance

Two pencil timeouts are included: one warmup and one measured execution.

Eleven planned executions are missing. Producer verification is not independent replay.

All 36 ratios are null. Controller failed during checkpoint19; source: coverage-counts.json.

Pencil upper gate: terminal checkpoint 18 observations

Run: pencil-p186379-20261030-c1. Caller-supplied source commit: 543a54b4b1c3be7052872af3ffe393a44c69a3c3.
Observations only. No statistical, speed, mathematical or timing qualification is inferred.
One public synthetic mathematical target at p=186379. Controller failed during checkpoint19; last committed checkpoint18 is incomplete.
Workloads: 1; expected pairs per price cell: 5; slots: 18; observed: 7; missing: 11.

Recorded outcomes

pencil:timeout: 2
rho:verified: 3
rho_AA:verified: 2
Missing rows remain missing; capped, timeout, error and other outcomes retain their original labels. Counts from different epochs are not pooled.

Pair coverage by price cell

Workloads: 1; expected pairs per price cell: 5; slots: 18; observed: 7; missing: 11.

Arms: pencil, rho, rho_AA. Planned slots are not observations.

Fewer than two comparable ratio cells are present. Diagram of planned scope and observed progress; no performance plot.
Observations only. No algorithm ranking, mathematical verdict, timing qualification or successful candidate/rho ratio.
Last committed generation18 archive and selected session files passed versioned hash and size checks. Embedded session remains as recorded; its running metadata is not rewritten.
Seven of18 planned slots are retained: five producer-verified rho/control rows and two pencil watchdog timeouts, one warmup and one measured. Producer verification is not independent replay.
Three warmups and four measured executions are observed;11of15 measured slots are missing. No successful candidate exists. Missing work is not zero cost.
Controller3 failed at07:54:08.858UTC with CRIU dump failed; retained log, no generation committed. Generation19 is not an additional observation.
Scientific protocolv4 and unchanged instrument govern rows. Version5 changed only controller supervision. No fourth controller or replacement run occurred.
All clocks remain unqualified. Total active worker time and spending remain unknown. Prior failed campaign costs remain separately bound.
Canonical package/check retain incompleteness findings without suppression. Independent terminal review is pending because delegated agents reported a usage limit.
The six-hour authorization expired at11:17:54UTC; this saved-record analysis authorizes no new computation. Full1260 pencil evidence remains incomplete.

Separate resource observations

No conversion to algorithm cost units.

```
{"accounting_notes":["Controller terminal; generation19 failed to commit, generation18 retained.","Two pencil ti
meouts are retained, including one measured row; no candidate solve.","Active worker time, exact termination ti
me and total spend remain unknown.  EC2 lookup returned no instance, not an exact termination receipt.","No ind
ependent replay or new experiment was launched; expired budget is not renewed.","Prior b1 failed attempt costs
remain linked separately, without refund or pooling."],"allocated_dollars":null,"allocation_and_algorithm_costs_d

All36 exact price cells

S2 is twice S/M; N10 is ten times the native event price. Incomplete/unavailable ratios are null, not zero. Partial admitted sums are retained in JSON as diagnostic only; no partial sum is promoted to a complete ratio.

Cell	S2/I/N10	Admitted/expected	Method/rho exact	With calibration/rho exact
