Source-bound Lean artifacts
Unsigned PCC claims; no runtime claim
Actual index-bit equality mask
Omit first differing bit; denominators nonzero
OPEN: literal Cauchy base content
Actual coefficientwise correction bounds
Crossing gain >= G_i; all source charts integral
Conditional completed-matrix transfer
Base content k -> crossing content k+g
Computed monic quotient H
W_new - W_base = C H; every node preserved
OPEN: integral U,V weighted modes
Charge mask refinement, degree and precision
OPEN: recursion and complete expected bit cost
