Why the fused residual walk takes more steps
measured = predicted
simulation, exploratory (model fitted here)
simulation, confirmatory (frozen)
real code, p36 (frozen)
measured walk-step ratio, 95% interval
predicted walk-step ratio (coincidence-hazard model)
1.0
1.1
1.2
1.3
1.4

Walk-step ratios: prediction against measurement (local L0 sandbox; not validated)

ratio	predicted	measured	95% interval	inside	source
F=4 fused/base	1.1638	1.1558	[1.1434, 1.1687]	yes	simulation expl.
