F3: f=X^5-X
Monic, degree 5, separable / squarefree
All actual reduced polynomial pairs
u monic; deg u<=2; deg v<deg u
u divides v^2-f
Proved complete coefficient classification
91 canonical candidates; exactly 8 valid
Separate open obligations
Geometric Picard identification
Cantor group law / cyclic subgroup proportions
Actual u-polynomial splitting
7 split, including identity; 1 nonsplit
Nonsplit u=X^2+1, v=0
Exact finite-model fraction =7/8
Difference from 1/2 =3/8
Refutes exact finite-half reading
Qualified q-to-infinity limit preserved
