Mathematical experiment preparation: gate software and published runtime

2026-10-29T23:58:29Z

Public synthetic known-answer mathematical research. Evidence observations only; no judgments, new cohort executions or qualification.

Zero executions refers to this named plan-only input, not historical experiments. Per-source software scopes are distinct and counts are never pooled.

Plan-only observations

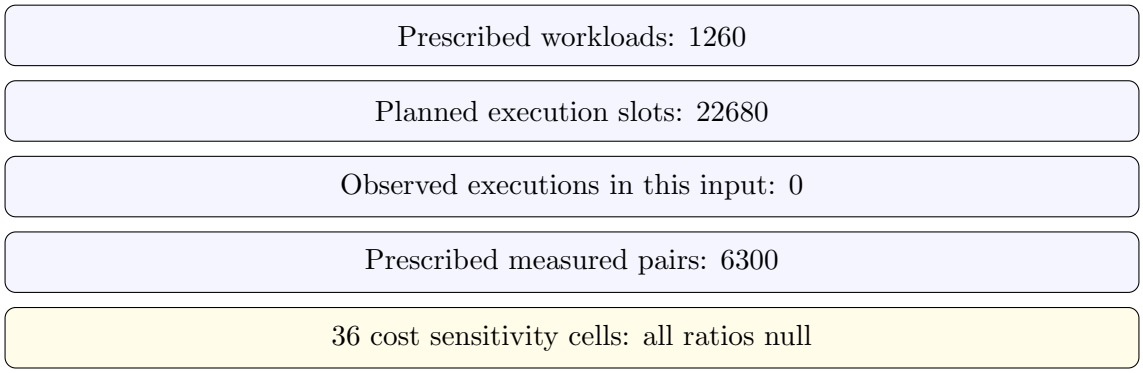

Diagram rather than a performance graph: this input contains no observed empirical ratios. Counts are read from source [plan]; no rates or uncertainty estimates are inferred. Warmup execution slots prescribed: 3780. No empirical cost ratio is available in this snapshot. Software validation and prepared inputs do not constitute independent protocol, binary, resource or launch admission.

Scoped source observations

[**gate-software**] Software validation only. The full 1260 design remains intact; the exact p739 gate has 60 planned targets. Counts refer to software tests, not empirical targets.
export_private_units: 37
export_production_scope_tests: 2
native_cli_tests: 1
native_unit_tests: 29
planned_gate_pairs: 300
planned_gate_slots: 1080
planned_gate_targets: 60
qualified_ratios: null
solver_executions: 0
[**gate-review**] Independent read-only software scope review. No mathematical workload, timing observation or cost ratio was replayed; source-commit binding is a separate record.
findings: []
review_result: "no_concrete_gate_logic_defect_found"
solver_executions: 0
source_commit: "99b10d5c6f3f5f3fcdea8fb5a9484ac3a9ec6ff0"
[**controller-publication**] Retained CodeBuild source-update receipt. The CloudFormation change set was not executed. Its source parameters remain old, so later stack changes require reconciliation.

change_set_executed: false
experiment_launched_at_receipt: false
inline_policy_unchanged: true
other_project_properties_unchanged: true
source_update_completed: true
[**image-publication**] Approved FROM/COPY image publication and stopped-container extraction. Elapsed time is infrastructure publication/verification, not mathematical performance. No workload was started.
historical_qualification_transferred: false
image_digest_pull_verified: true
publication_seconds: 122
runtime_bytes_equal: true
solver_executions: 0
stopped_extraction_verified: true
[**bytebinding-audit**] Separate check of retained archive and image bytes plus API receipts. This auditor also published the image; it is not an independent-personnel audit or live cluster check.
archive_readback_matches: true
cloud_mutations_in_audit: 0
empirical_ratios: null
image_runtime_bytes_equal: true
inline_policy_bytes_equal: true
source_only_project_match: true

Evidence and limits

No software test count is an empirical target count. Missing costs stay null. Resource authorization is limited to its explicit source scope; no budget, deadline, infrastructure approval or independent review is inferred. The prior 19:06 report and its Python generator remain historical artifacts; new reports use this native renderer. [**plan**] named plan-only input; not historical experiments
