Twist-assisted IC: experiment dependencies
Only E00 has an implementation; other nodes are planned
E00: polynomial preflight
Exact coefficients + evaluated certificates
E01: trace fibers
Null, duplicate-lift and 2-primary controls
E10-E12: covers and maps
Complement test / gluing / divisor norms
Subgroup kernel and recovery
E02-E06: restricted bases
Coordinate / slope / norm / divisor families
Exact projected relation census
E16-E17: conditional ingress
Pairing applicability / arithmetic lifts
No usable transfer assumed
E07-E09: equivalent systems
Membership encodings / solver ordering
Torsion and Galois descent
E13: restricted cover images
Size, degree, genus and membership costs
E14: representation controls
Twist model / cheap constants / isogenies
E15: combined pipeline panel
Matched IC baseline + same-target rho
All phases, independent replay
