Actual public polynomial families and branch (q,y)
ell_0 = 1; columns T_j = e_(j+1) - ell_(j+1)e_0
Public insertion T and tail deletion L
LT = I; TL = I on branch
Conditional quotient-moment chart
F,H,V and branch witness hypotheses
Actual matrix S_red = T^transpose S T
Exact radical line = span(Lw_0)
Derived numerical corank 1
Nonzero diagonal adjugate entry
Actual residual coefficient matrices + cofactor equations
Recover a nonzero quadratic witness
Still missing: efficient public-input moment/equation finder
Full norm/scalar attachment and uniform total bit bound
