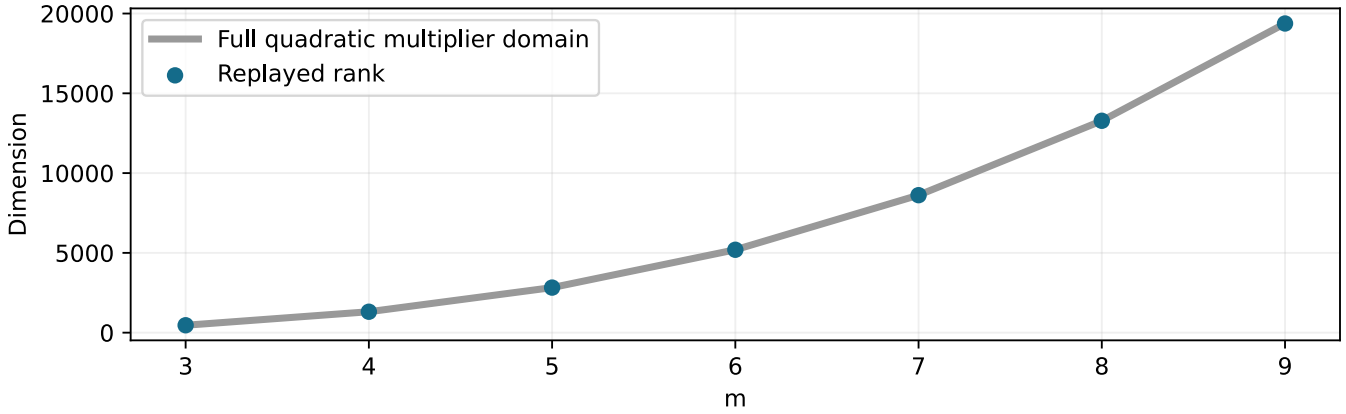
Bounded prime quadratic coefficient maps

Observations only; independent scientific review and formalization pending. Run n83-prime-quadratic-20261030-r1. Seven templates and all42 source cases passed production, fresh replay and S3-restored replay. Zero failed, capped or timed-out templates.

m	Source cases	Rank / columns	FFD interval
3	6	464 / 464	7–17
4	6	1311 / 1311	7–17
5	6	2824 / 2824	7–17
6	6	5195 / 5195	7–17
7	6	8616 / 8616	7–17
8	6	13279 / 13279	7–17
9	6	19376 / 19376	7–17



Meaning. The recorded degree-six maps are injective. The pair-covering and selector-square regular-sequence argument in PRIME_QUADRATIC_DESIGN.md gives conditional highest-form FFD ≥7. Matching exact source and factor-base hashes to the earlier upper17 dataset gives7–17 for all42 cases. Seven shared maps are not42 independent rank experiments. No exactFFD,newLFD,solving-degree,degree-of-regularity or elite-base improvement is established.

Inputs. Original,baseline,spike40 arms; planted and natural targets;m3–9. Each arm retains its immutable factor base and source system. The full three-family m2–9 objective remains open; this continuation measures prime cases only.

Execution. One template process at a time;8GiB address space;300s producer and300s replay,5s termination grace;120s assembly passes;4800s outer limit;zero automatic retries. Caps:100000columns,5000000coefficients,50000000reduction updates,2000000basis entries. Exact commands and identities are in the frozen protocol and archived runner. Existing-host fallback; fresh EKS source-access probe timed out with no retained Pod/log and gives no access verdict. Interval 2026-10-30T15:41:50Z–2026-10-30T15:43:04Z is diagnostic only,with no isolation or speed claim.

Validation and retention.26 native test invocations comprise10 new tests and16 duplicated donor invocations;two runner controls retain failure/timeout journals. All198 raw payloads matched their hashes before and after S3 replay. Every coefficient column and elimination row is retained. Archive86,270,953bytes; format and replay instructions:PRIME_QUADRATIC_FORMAT.json and evidence/prime-quadratic/README.md. Metadata publication required a directory-path correction; no experiment rerun.
