R115: direct x=0 base uniformizer and four places

5 November 2026 | exact marked-23 degree-7 base equation

Set t=v/x; E(x,t)=F(x,x*t)/x^2 has unit x derivative.

Unique x(t) solves E through t^128; original f residual vanishes.

The direct parameter has v_t(x)=2 and v_t(v)=3.

Four base places have ramification e=1,3,1,2.

Their local degrees sum to the degree-7 base field.

Next: extend base precision beyond x^161 denominator pulls.

Fresh replay, altered-source rejection, independent source composition: pass.

Lean finite support arithmetic: pass.

Lambda and N51 valuations at x=0 remain open.

Result SHA-256:
