APS public-fixture replay: mathematical checks; no cost attestation
Existing producer JSON
Bind receipt to exact input SHA-256
Strict bounded parsing
Schema / unknown fields / duplicate keys / caps
Fixed public fixture + model + ICV1
Canonical G,Q; curve and subgroup checks
Replay seed and retries
Rejected draws, labels, Montgomery sign convention, orbits
Separate existing BigUint point arithmetic
Affine add / double / known-scalar multiplication
Reported complete
Enumerate allowed tuples and all sign classes
Require exact coordinate-set equality
Reported partial
Check every emitted tuple
Keep enumeration partial
Signed point sum = O; recompute A and B
Require B != 0, d = -A/B and dG = Q
Check outcome and retry termination
Hash-bound replay receipt
Witness / exact-set / sampling checks
Costs and execution history explicitly unattested
Any failed check: reject
