Untrusted proof input: p, r and auxiliary s
Pocklington dependencies, factors and witness
Exact proof verification
F divides n-1; F^2 > n; Fermat and gcd checks
Private immutable checked-prime context
Width and work policy checked on reuse
not certified
Curve and target validation
Uncovered value
Exact primality (AKS above u64)
Fixed s in [2p,4p]
Factor-base construction and certificate replay
Fourier / point / hash network construction
Exact leaf search / source recursion guard
No practical crossover established
