Run report: two guesses at (22, 8)

- **Study:** `research/dreg_two_guess_20261106/`, pre-registered before any run. No amendments.
- **Run:** 2026-11-06 22:16 UTC to 2026-11-07 01:17 UTC.
- **Class:** stage diagnostic. No `S`, no rho ratio, no speed claim.
- **Standing:** unverified assertion until a pcc verdict exists.

What ran

- **K2L:** $x_{15} := x_7 + c$, $(e_1 + x_3)_{20} = h$. **K2S:** $x_{15} := x_7 + c$, $x_{23} = h$. Four branches each, 12 unsatisfiable draws, degree 4, `--max-cols 150000 --check`, early stop at the first failing branch.
- **Identity control N:** the committed `S3.d5.b0`, rerun on the new build.
- 31 processes, all exited 0. 44 occurring variables (149,986 degree-4 columns); 244–484 s per degree-4 scan.

Measured values

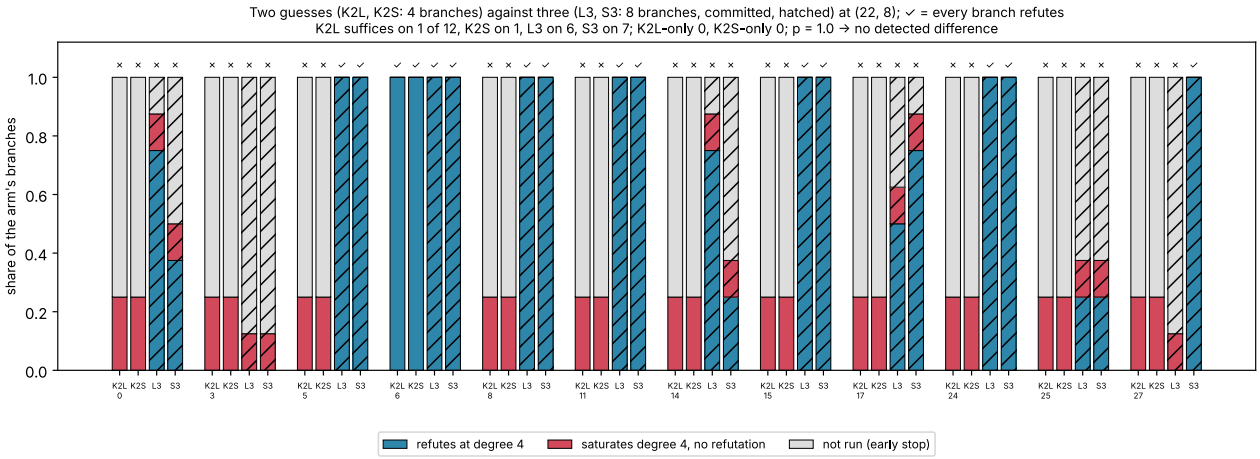

Figure 1: Branches per arm and draw as a share of the arm's branches; the three-guess L3 and S3 are the committed records (hatched). Source: `plot.py` (layout only) on `plot-data.json` from `dreg_two_guess_score --plot-data`.

- **Controls:** valid.
- **K2L** and **K2S** each suffice on 1 of 12 draws (draw 6), against 6 (L3) and 7 (S3) with three guesses.
- **Primary verdict:** no detected difference (no discordant draw).
