Actual six raw inputs
prime or ordinary binary
All top forms vanish at
u=1; x=y=z=v=0
u^d survives for every d
No finite BFS regularity
raw witness does not transfer
Add all five field equations
Highest forms t^q; q > 1
Every monomial past 5(q-1)
is divisible by a field top
BFS regularity <= 5(q-1)+1
Prime p > 3 implies p >= 5
No field input enters degree < 5
Exact last / closed solving = 5
Original prime UNSAT hypotheses
Published exact last fall = 5
Unit ideal: basis in V(F,d)
iff 1 is in V(F,d)
Exact closed solving degree = 5
