N83 radix neural probe: no validated lead

Fixed prime m=2 census · 3,010 rows · 35 exact, 2,975 censored lower bounds

Censored predictions below degree 42

188 flagged · 188 refuted by certified bounds

Censored lower-bound constraints violated by full-fit model

2,834 / 2,975 (95.26%)

Exact-row 5-fold MAE: MLP 21.90 · censored-aware constant 145,919.40

The constant is dominated by an extreme certified bound; MAE is descriptive. No new factor-base points were generated.
