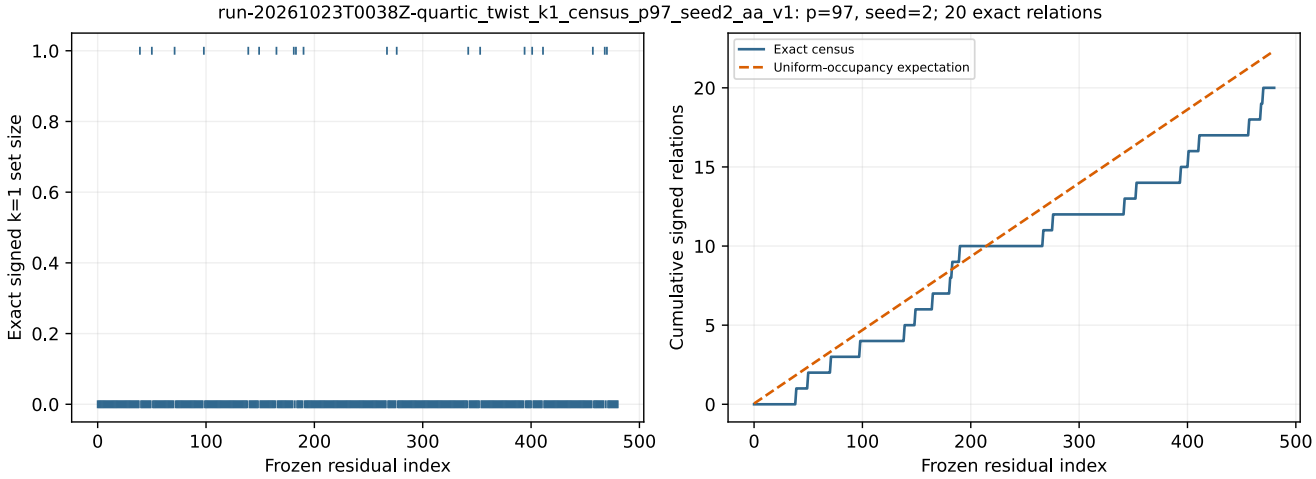
Recorded observations

- Exact point-keyed group census and independent scalar-keyed audit both pass: 20 signed k=1 relations across 481 frozen residuals; 461 have zero.
- First hit at zero-based query 39; uniform-occupancy heuristic 22.343 relations, observed/heuristic 0.895.
- Independent BSGS verified 72 physical factor logs and the target log using a 9410-point baby table; all 481 complete signed-set digests match.
- Point-keyed census charged 244,440 setup and 249,233,829 query Fp multiplications; these are reference-oracle costs, not polynomial IC costs.



Dashed expectation is a first-moment heuristic, not a fitted model or confidence interval. Group-oracle work is outside candidate IC cost.
