All five Weierstrass coefficients
F2: 32 tuples; F3: 243 tuples
Kernel-decided finite forall
Nonzero discriminant + source trace predicate
Explicit equivalence
Polynomial count = actual point cardinality
Actual supersingular count sets
F2: {1,3,5}; F3: {1,4,7}
Actual E/F2
#E = 5; subgroup prime 5; k = 4
Actual E/F3
#E = 7; subgroup prime 7; k = 6
Every prime divisor of actual point count
Modular embedding order at most 6
Direct Lean negation of universal k = 2
Even p > 2 and subgroup prime r > 2
