Actual-quintic nonbranch composition: phase3 source diagnostics

One released software-validation sequence | T1538 | 2026-11-03

Source elaboration completed with four concrete errors before its finite deadline.
Two quotient scalar-map goals; mapped constant vs scalar-map norm mismatch;
IsUnit(2) simplification mismatch. Original source and diagnostics retained.
Native compiler receipt: one invocation; child reaped; no cleanup errors;137samples.
Exact full pre/post custody matched all16,736files /3,111,892,318bytes.

Recorded phase wall seconds (one observation each; no performance inference)

pre: exit0, 87.930946s

compiler: exit1, 137.255997s

post: exit0, 93.715603s

Total observed phase wall time318.902546159s; released maximum900s.
No theorem acceptance. Assumptions and all original theorem signatures unchanged.
Successor adds one scalar helper; planned10theorems+4controls=14axiom readbacks.
Evidence: native receipts, four diagnostics, durable PID identity and process samples.
No scientific trajectory or new timing comparison was run.
